آبیبان

An important message to all farmers and water well drilling companies

Abyaban can provide the depth, yield (flow rate) and thickness of the aquifer.

Farmers drilling deeper for water as drought drags on. This makes several environmental problems and greatly treats the sustainable agricultural production in Iran as around world. Moreover, the rising demand for well drillers made us to produce a high performance electromagnetic-based device for groundwater exploration that was patented in Iran.

Unlike traditional water dowsing (witching), the electromagnetic-based device developed by Dr Mehdi Emadi (PhD) and Dr Mostafa Emadi (PhD) is based on scientific principles and has been shown to consistently provide accurate water well drilling results. This patent passed several strict scientific reviewing processes from different organizations such as Iran national elite foundation and Tabarestan Technology Incubator (TTI) as a subdivision of Sari University of Agricultural Sciences and Natural Resources. This is also acknowledged by the several exhibitions, international congress, Iranian ministry of power and also a lot of national and international well drilling and Dam Construction companies.

The Abyaban is the brand name of the Danesh Gostaran Ab Sarouye (DGAS) firm that is registered in Iran with No of 13113 to sale and rent the electromagnetic-based instrument in Iran and around the world.

The experienced team of Abyaban provides solutions for water well location and helps the clients and authorities to find water well locations before go to the expense of drilling water well. There are more than 11500 number of successful groundwater location surveys performed by experts of Abyaban in last decade mostly in Iran and some neighbor countries such as Saudia Arabia, Iraq and Armanestan. Nobody has ever drilled a dry well as the results of our device.

The patented device of inventors who involved in Abyaban can also provide the practical solutions about different type of problems on Qanat and Dam infrastructure.

Services

Using electromagnetic-based instrument that was patented by Abyaban, we can provide the following services worldwide:

- Best localization of borehole (water well) before drilling begins
- The depth, yield (flow rate) and thickness of aquifer
- Advise on all phases of your new water well project
- Determination of contaminated route and salinity changes of groundwater
- Determination of susceptible area for land-sliding
- Water surveying for springs and Qanats
- Identification of groundwater breakaway in dam foundations
- Assistance in the planning of large-scale development of dry land agriculture

This information can potentially help save hundreds if not thousands of dollars on a new borehole (water well) drilling. The Abyaban proudly provides groundwater assessment services worldwide.

Call Abyaban surveyors at 0098-9112532593 or email us at info@abyaban.com to let us help you in water sourcing needs or to find out more about our services. No matter what country you live in.

Please contact us with any questions on the following:

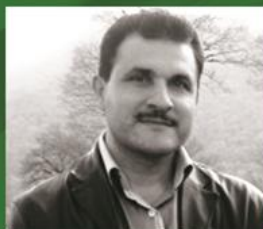

Address: Tabarestan Technology Incubator (Markaz Rosh Fannavari Tabarestan), Amir Mazandarani Street, Sari City, Mazandaran Province, Iran

Phone: 0098-9112532593

Fax: 0098-1133394014

Website: www.abyaban.com

Two outstanding groundwater surveyors of Abyaban are

Dr. Seyed Mehdi Emadi

Dr. Seyed Mostafa Emadi

Address: Tabarestan Technology Incubator
(Markaz Rosh Fannavari Tabarestan),
Amir Mazandarani Street Sari City,
Mazandaran Province, Iran
